JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

XI. *Ambergris found in Whales. Communicated by Dr. Boylston of Boston in New-England.*

THE most learned Part of Mankind are still at a Loss about many Things, even in medical Use ; and, particularly, were so in what is called *Ambergris*, until our *Whale* Fishermen of *Nantucket*, in *New-England*, some three or four Years past, made the Discovery. Their Account to me is this.

Cutting up a *Spermaceti* Bull *Whale*, they found accidentally in him, about twenty Pound Weight, more or less, of that Drug. After which, they, and other such Fishermen, became very curious in searching all such Whales they kill'd ; and it has been since found in lesser Quantities, in several Male Whales of that Kind, and in no other, and that scarcely in one of an Hundred of them. They add further, that it is contained in a Cyst, or Bag, without any inlet or outlet to it, and that they have sometimes found the Bag empty, and yet entire.

The Bag is no where to be found, but near the Genital Parts of the Fish. The *Ambergris* is, when first taken out, moist, and of an exceeding strong and offensive Smell.

Whether or not (from the Account above) the Ambergris be naturally, or accidentally produced in that Fish, I leave to the Learned to determine.
